Friends of NCHS Fiscal Year 2020 Recommendation for the National Center for Health Statistics

The National Center for Health Statistics (NCHS) is the nation’s principal health statistics agency. Housed within the Centers for Disease Control and Prevention (CDC), it provides critical data on all aspects of public health and the health care system through data cooperatives and surveys that serve as a gold standard for data collection around the world. The 60 undersigned members of the Friends of NCHS urge appropriators to protect NCHS’s budget from further cuts and provide the agency with $175 million in budget authority in FY 2020, $15 million more than FY 2019.

NCHS collects data on chronic disease prevalence, health disparities, emergency room use, teen pregnancy, infant mortality, causes of death, and rates of insurance, to name a few. These data are used by the Census Bureau in informing its population estimates and projections; by the U.S. Department of Agriculture in developing nutrition policies that guide multibillion dollar federal food assistance programs; by state and local governments and public health officials; by federal policymakers; and by demographers, epidemiologists, health services researchers, and other scientists. In the last year, critical research findings, including the number of deaths attributable to the opioid epidemic, decreased life expectancy in the U.S., and trends in fertility rates, were informed by NCHS data. NCHS health data are an essential part of the nation’s statistical and public health infrastructure.

We greatly appreciate Congress’s longstanding leadership in securing steady and sustained funding increases for NCHS, including efforts to modernize the National Vital Statistics System—moving from paper-based to electronic filing of birth and death statistics—with a $5 million increase in FY 2016. Thanks to Congressional support, NCHS has funded states and territories to speed the release of birth and death statistics, including infant mortality and prescription drug overdose deaths. In fact, the percentage of mortality records reported within 10 days has increased from 14 percent in 2012 to almost 50 percent in 2016.

Nevertheless, since 2011, NCHS has been essentially flat funded, greatly diminishing the agency’s purchasing power. Current base funding remains below FY 2010 levels, adjusted for inflation, and the agency does not expect to ever recover the roughly $25 million in supplemental Prevention and Public Health Fund dollars it lost in 2013. NCHS also faces increasing costs on the horizon associated with state and vendor contracts and other infrastructure challenges related to survey redesign and systems improvements that will require additional resources far beyond current levels. Any cuts below the agency’s FY 2019 level, however seemingly minor, would have a demonstrably negative effect on the agency’s programs, survey data, and staff.

For example, if NCHS’s budget is reduced below its FY 2019 funding level, NCHS will need to consider eliminating or radically altering one of its two seminal surveys: the National Health Interview Survey (NHIS)—the principal data source for studying demographic, socioeconomic, and behavioral differences in health and mortality outcomes since 1957—or the National Health and Nutrition Examination Survey (NHANES), which has assessed the health and nutritional status of adults and children in the United States since the early 1960s. Despite making marginal adjustments to accommodate years of budget cuts, including reducing sample size and delaying necessary survey innovations, the agency cannot responsibly sustain these surveys if its funding level dips below the amount it received in FY 2019, $160 million.

Congress’ leadership has helped NCHS rebuild after many years of underinvestment and stabilized the collection of essential health data. Cuts to NCHS’s budget now will only undermine progress made over the last decade. We urge lawmakers to protect NCHS’s budget from further cuts and by providing the agency with $175 million in FY 2020.
